

CLAIMS

What Is Claimed Is:

1. A golf club, comprising:

a head defined by a face and a top surface;

an alignment assembly comprising a dome attached adjacent to said top surface;
and

an alignment image inscribed on said head.

2. The club of Claim 1, wherein said dome is further defined by a top surface, said top surface having a slot formed therein.

3. The club of Claim 2, wherein said slot defining an axis that is aligned along a line that is generally perpendicular to said face.

4. The club of Claim 3, further comprising said inscribed alignment image being inscribed on said projection surface, said slot further defining a parallactic sight line in alignment with said inscribed alignment image and said slot.

5. The club of Claim 4, wherein said dome is defined by a top surface, said dome top surface being generally coplanar with said club head top surface.

6. The club of Claim 3, wherein said dome is further defined by a void formed within said dome, said void bounded at its top by said top surface and at its bottom by a projection surface.

7. The club of Claim 5, wherein said projection surface, slot and said alignment image are oriented whereby said alignment image is aligned with said slot along a parallactic alignment sight line.

8. The club of Claim 2, wherein said slot defines a line that is generally perpendicular to said face.

9. An alignment assembly for attachment to a top surface of a golf club head, comprising:

a dome defined by a top surface and a projection surface, said dome further defined by a slot formed in said top surface and said projection surface further defined by an alignment image inscribed thereon.

10. The assembly of Claim 9, wherein said top surface further comprises at least one darkened portion of said surface adjacent to said slot.

11. The assembly of Claim 10, wherein said projection surface further comprises a lightened portion.

12. A golf club having head defining a face and a top surface, the head comprising:

parallactic alignment means for defining a parallactic alignment sight line, said parallactic alignment means comprising a dome having a slot formed therethrough to define a parallactic alignment sight line interconnecting said slot with an alignment image; and

planar alignment means for defining a planar alignment sight line.

13. The club of Claim 12, wherein said slot associated with said club is oriented perpendicular to said face.

14. The club of Claim 13, wherein said parallactic alignment means comprises a projection surface associated with said head opposite to said slot.

15. The club of Claim 14, wherein said projection surface further comprises a lightened portion generally opposite to said slot.
